

Juan Manuel García

Python & full-stack engineer

Buenos Aires, Argentina · remote worldwide

jmg.github.io · github.com/jmg · toptal.com/developers/resume/juan-manuel-garcia

Writing software professionally since 2008. I build the product, the infrastructure it runs on, and answer the phone when it breaks: **a network of 21+ Shopify apps used by 10,000+ merchants**, **DeployCloud**, a managed PaaS you can drive from a chat, and **Crawley**, an open source Python crawling framework. Back end, full stack and DevOps — Python and Django first, TypeScript and Next.js close behind, and AI features that have to survive real traffic.

2008 writing software professionally	21+ Shopify apps in production	10k+ merchants served	Top 3% Toptal Verified Expert

EXPERIENCE

Founder & principal engineer · DevCloud Software 2015 — now

- Built and run **a network of 21+ Shopify apps** — reporting, tagging, automation, upsells, SEO and support — used by 10,000+ merchants, including brands like ANINE BING.
- Django and Python back ends with **Redis / RQ worker fleets** that ingest tens of thousands of webhooks an hour: queueing, back-pressure, and reports spanning years that come back in seconds.
- DeployCloud** (deploycloud.app): a managed platform-as-a-service driven by `git push` or any MCP client — zero-downtime deploys, preview environments, managed Postgres, MySQL, Redis and pgvector, cron jobs, autoscaling and one-click rollback. Built and operated solo, from the build queue to the TLS certificates.
- LLM features in production: AI tagging, an SEO assistant that writes back to the store with undo, AI-drafted support replies and virtual try-on.
- Own the whole lifecycle: product, code, infrastructure, migrations, backups, monitoring and on-call.

Verified Expert in Engineering · Toptal 2015 — now

Member since March 2015, in the network's top 3% of talent.

Python developer · ShipHero 2015 — 2020

Five years on a warehouse management and fulfilment platform: Python services and the Shopify integration — orders, inventory and fulfilments over Shopify's APIs and webhooks — running on AWS for high-volume merchants.

Python web developer · Deviget 2011 — 2015

Freelance web developer · Python, Ruby, PHP 2010 — 2015

Web & C# developer · MSA, Ingematica, TNS Gallup 2008 — 2011

SELECTED PRODUCTS

Shopify apps · DevCloud

Easy Reports — custom reports and scheduled exports, fed by tens of thousands of webhooks an hour.

Easy Tagging — a rules engine plus AI tagging over a whole catalogue, on its own worker fleet.

Shipping Tracker — branded tracking fed by 1,000+ carriers; tens of thousands of shipments re-pollled a day.

Own products

DeployCloud — managed PaaS you can drive from a chat, any language, zero-downtime deploys.

Decknote — Kanban boards where every card opens like a Notion page; real-time collaboration and an API.

BookClock — booking for service providers: payments at checkout, calendar sync, reschedule links.

HelpBird — live chat plus a shared team inbox with AI-assisted drafts; also a Shopify app.

AI SEO Pilot — the model proposes title, meta and alt-text fixes; the merchant approves; every change can be undone.

Embedded Chat — WhatsApp and Messenger chat on the storefront, as a theme app extension.

TryOnIA — virtual try-on on the product page, with image generation on a queue.

Easy Metafields — fills and maintains metafields store-wide from rules, with dozens of RQ workers.

+ 12 more on the same Django + Redis backbone: automations, upsells, discounts, alerts, social login, AI publishing.

OPEN SOURCE

crawley ★ 192 — Pythonic crawling and scraping framework on non-blocking I/O; 34 forks.

pyfb ★ 71 — a Python interface for the Facebook Graph API.

data-layer-generator ★ 54 — generates the data layer for Python domain objects.

node-simple-chat ★ 26 — real-time chat on Node.js and Socket.io; 17 forks.

70 public repos on github.com/jmg, since 2010.

Jentry — hosted error tracking and performance monitoring, a Sentry alternative.

Crawley Cloud — scraping API: JSON, CSV or Markdown from any site, with headless browsers and proxy rotation.

DeskPine — support email and a searchable knowledge base in one workspace.

Shopping Master — a commission-free online store: catalogue, payments, shipping and discounts.

HOPS Web — the HOPS astronomy toolkit in the browser: plan exoplanet observations, fit transit light curves.

STACK

Languages	Python, TypeScript, JavaScript, SQL, PHP, Ruby, Go, C#
Back end	Django, Flask, Next.js, Node, Rails, Celery / RQ
Data	Postgres, MySQL, Redis, pgvector
Infrastructure	Docker, Linux, NGINX, CI/CD, zero-downtime deploys, monitoring, S3 backups
AI	Claude and OpenAI APIs, MCP servers, agent tooling, web scraping, Playwright

EDUCATION

Systems Engineering · UTN, Buenos Aires 2008 — 2015
Universidad Tecnológica Nacional.
